SYNTHETIC / HYPOTHETICAL TEST MATERIAL

Synthetic local-first presentation pipeline

A hypothetical design for evidence-preserving technical talks

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

Design the pipeline around evidence

Scientific review needs exact data mapping, source lineage, and explicit uncertainty.

Presentation tools can draft and arrange slides while review checks the source trail.

> **No empirical performance data**

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

Separate evidence from presentation layout

Source identifiers and verification state travel with the rendered deck.

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

Keep figures deterministic

Figure field	Hypothetical input
Load tier A	120 req/s
Load tier B	240 req/s
Load tier C	360 req/s

Synthetic fixture values, not benchmark results.

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

Layout intent should survive backend changes

Assertion

One claim per slide

Evidence

Show source and data

Review

Keep caveats visible

Synthetic design example · no measured results

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

Track limitations as structured output

- Unsupported chart type → explicit warning
- Raster-only element → object-level editability report
- Missing source ID → build error
- Unverified evidence → visible pending state
- Provider call → explicit opt-in and cost boundary

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

Compare capabilities, not marketing labels

Check	Required evidence
Export	PPTX produced by local command
Editability	Text, shapes, charts inspected in package
Fidelity	Every rendered page reviewed
Lineage	Source IDs preserved in sidecar
Operations	Version, dependencies, services logged

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

A backend is useful only when its boundary is clear

Local renderer

Repeatable exports without model calls

AI service

Optional drafting; provider and cost disclosed

Scientific QA

Checks every output outside the renderer

SYNTHETIC / HYPOTHETICAL · E_SYN_01 UNVERIFIED

Recommendation for this test

Keep evidence and chart data in a backend-neutral contract.

Use isolated adapters; promote a renderer only after same-input, editable-object, and visual checks pass.
